INDEX

A

Absolute encoders, 391
Acceleration error coefficient (c_2), 389
Accelerometers, 84, 390
Accuracy, 5, 117
  of data, 213–214
  of servomechanisms, 621–625
  thermocouple, 144
ACFM (actual cubic feet per minute), 175
Achieved temperature, 132
ac impedance bridge transducers, 111–115
  capacitive, 114–115
  inductive, 112–114
Acoustic velocity probes, 172–173
Across variables (term), 303, 304
ac servomotors, *see* Alternating-current servomotors
Action blocks, 684, 685
Action-dependent HDP (ADHDP), 816–817
Actual cubic fee per minute (ACFM), 175
Actuators, 392–399
  electromechanical, 392–394
  hydraulic, 394–396
  pneumatic, 396–399
Actuator compensation, 804–806
Adams–Bashforth corrector methods, 356, 357
Adams–Moulton corrector methods, 356, 357
Adaptive control, 441–442, 797–798
Adaptive critics, 816
Adaptive reinforcement learning, 809–810
A/D converters, *see* Analog-to-digital converters
Adders, 249, 406, 407
Addition:
  binary, 846
  block diagram of, 456, 457
  Boolean, 248
ADHDP, *see* Action-dependent HDP
Adhesives, 77
Adjustment, 279
Admittances, 39. *See also* Impedance(s)
  chordal, 53–54
  computing, 40–41
  in series/parallel, 39–40
ADP, *see* Approximate dynamic programming
Advance operator, 378
Aeronautics, 444
Aliasing, 185, 198, 199
Alloys, 134
AlNiCo magnets, 552, 553
Alterables (term), 269
Alternate hypothesis, 23
Alternating-current (ac) servomotors, 557–562
  dc servomotors vs., 546
  mathematical models of, 559–562
  types of, 557–559
American Standard Code for Information Interchange (ASCII) code, 849
Ammeters, 834–835
Amplifiers, 311
  function of, 386
  linear, 569
  PWM, 569–572
Amplitude condition, 518–526
Amplitude–frequency response tests, 96
Analogs (term), 314, 315
Analog computation, 492, 494–500
Analog controllers, 669–672
Analog Devices (company), 872, 874
Analog electronics, 826–840
  circuit analysis in, 831–833
  definitions used in, 827–828
  electrical elements in, 828–831, 832
  examples of, 838–840
  RL/RC transient response in, 835–838
  sources/meters in, 834–835
Analog filters, 191–198
  Butterworth, 193–194
  elliptical, 195, 196
  inverse Tchebyshev, 195, 196
  least squares method of designing, 196, 197

Copyrighted Material

Analog filters (*continued*)
prototype circuit for, 197, 198
Tchebyshev, 194–195
Analog instruments, 118
Analog simulation, 352
Analog-to-digital (A/D) converters, 211, 425, 852
Anchoring, 279
AND (Boolean multiply), 246, 247
Angle condition, 518–526
Angular velocity, 391
ANSYS, 867, 868
Antifuse switch, 252
A percent linearity or nonlinearity, 118–119
Apollo spacecraft, 444
Application-specific integrated circuits (ASICs), 241
Approximate dynamic programming (ADP), 794–795, 815–816, 819–820
APT (Automatically Programmed Tools) language, 697, 706–709
Arbitrary frequency response curve fitting, 196, 197
Architecting phase (system design), 289–290
Armature-controlled dc motors, 392, 393
ASCII (American Standard Code for Information Interchange) code, 849
ASICs (application-specific integrated circuits), 241
"Asking approach" to requirements identification, 268
Aspirated probes, 151
Astable multivibrators, 243
Asymptotic stability, 475
Asynchronous serial data transfer, 852, 853
A-type element, 305, 307, 312
Autocorrelation function, 363
Automatically Programmed Tools language, *see* APT language
Automobile suspension, 41, 43
Automotive industry, 444
Availability of information, 279
Available temperature, 132

B

Back emf, 393
Backing material, strain-gauge, 76
Backlash, 500, 661, 805–806
Backlash nonlinearity, 372
Backstepping neurocontrollers, 801
Balanced-design actuators, 574, 575
Baldwin Lima Hamilton (BLH) Corporation, 73
Bandpass filters, 203–204
Band reject filters, 204–205
Bandwidth, 340
Bang-bang control problem, 442
Bartlett window, 200, 201
Base rate, 279–280
Beam flexure used in accelerometer, 84
Behavioral evaluation, 294–295
Behind the Tape Reader (BTR), 697
Bell Labs, 444
Bellows, 396, 397
Bent-axis piston servomotors, 575, 576, 578
Best straight line, 94
Binary addition, 846
Binary numbers, 844–847, 849
addition of, 846
of different size, 844–845
and hexadecimal numbers, 845–846
two's complement of, 846–847
Bipolar drive PWM amplifiers, 570
Bipolar shunting, 97, 98
Bipolar-wound stepper motors, 564, 567
Bistable multivibrators, 243
Bits, 845
Black, H. S., 444
Blackman window, 200, 201
BLH Electronics, 73, 80
Block diagram reduction, 457–460
Block diagrams, 328–330, 456–460
addition, 456, 457
of control systems, 384–386
multiplication, 457
reduction of, 457–460
takeoff point, 457
transfer functions of cascaded elements, 458–460
Blocks, programming, 702, 705–706
Bode, H. W., 444
Bode diagrams/plots, 339–343, 345, 347, 349, 419, 421, 508
Boiler-generators, 440
Bolted assemblies, fatigue in, 52
Bonding adhesives, 77

Copyrighted Material

Boole, George, 246
Boolean logic notation, 246
Bourdon, Eugene, 70
Bourdon tubes, 70–71
Boxcar algorithm, 220, 221
Brainstorming, 270
Brainwriting, 270
Branches, 311, 312
Break points, 519, 520, 523
Bridge equations, 82–86
Bridge excitation, 102–103
Bridge substitution, 99–101
Bridge transducers, 69–115
  ac impedance, 111–115
  calibration, 93–102
  excitation, 102–103
  flexural devices, 70–73
  noise considerations, 105–111
  resistance balance methods, 91–93
  resistance strain gauge, 73–82
  signal amplification, 103–104
  slip rings, 104, 105
  Wheatstone bridge, 81–91
Brushed dc servomotors, 546–552
Brushless dc servomotors, 552–557, 592
  commutation of, 552, 554–556
  construction of, 552, 553
  cross sections of, 553, 556
  numerical example of, 556–557
  operation of, 552
  performance data for, 553, 556
Brush wear, 105
BTR (Behind the Tape Reader), 697
Buffer amplifiers, 670
Bulk micromachining, 866, 868
Buoyant force, 179
Butterworth filter, 193–194
Bytes, 846

C

CACSD (computer-aided control system design), 759
CAD, *see* Computer-aided design
CADENCE, 867–868
Calibration, 93–102
  dynamic, 95–96
  electrical substitution techniques, 96–102
  fitting equations to data for, 6–9
  of instrument, 117
  static, 4, 6–9, 93–95
Callendar bridge, 155, 156
Callendar equation, 159
Callendar–Van Dusen equation, 160
CAM, *see* Computer-aided manufacturing
Canonical forms:
  for continuous-time systems, 722–731
  for discrete-time systems, 731–739
Cantilever beams, 70
Capacitance, 38
Capacitive bridges, 114–115
Capacitive storage elements, 307
Capacitors, 829–831
Cascade control, 415, 417
Cascaded elements, 458–460
Cascaded instrument system, 64
Causal base rate, 279
Causal loop diagrams, 272
Celsius, degrees, 117
Central limit theorem, 17
Central processing units (CPUs), 848–850
Central tendency (most representative value), 9
Centrifugal pendulum, 395
Ceramic cements, 77
Ceramic rotors, 552, 553
Cerebellar model articulation controller (CMAC), 794
Cesium clock, 117
Cesium fountain atomic clock, 117
CFD Research Corporation, 867
CFM (cubic feet per minute), 175
Characteristic equation(s), 351
  closed-loop, 469–471, 481, 517–526
  open-loop, 469
Charette, 270
Chi-square distribution, 24, 27, 29–31
Chordal admittance, 53–54
Chordal impedance matching, 53
Chordal slope, 52
Circuit analysis, 831–833
Circular resonators, 870, 872
Clamped diaphragms, 71–72
Classical control theory, 322, 761
CLCE, *see* Closed-loop characteristic equation
CL (cutter location) level, 697
Closed-loop amplitude ratio, 512–514

Closed-loop characteristic equation (CLCE), 469–471, 481, 517–526
Closed-loop control system(s), 385
  with disturbance, 468
  open-loop control vs., 445, 446
  servoactuators for, *see* Servoactuators
Closed-loop control system analysis, 443–501
  block diagrams of, 456–460
  characteristic equation, 469–471
  closed-loop transfer function, 468, 469
  direct digital control, 446, 447
  effects of additional zero/pole, 474–477
  hierarchical control computers, 445–447
  hybrid control, 446, 447
  Laplace transforms, 448–456
  open-loop transfer function, 469
  real systems with digital control, 447, 448
  representation of, 468–477
  simulation for, 490–501
  stability, 475–486
  standard second-order transfer function, 471–472
  steady-state performance, 482, 483, 487–493
  step input response of standard second-order transfer function, 472–474
  supervisory control computers, 445–447
  z-transforms, 459, 461–468
Closed-loop frequency response, 627–629
  for nonunity feedback systems, 511, 512
  from that of open loop, 514–516
Closed-loop step responses, 627, 630–632
Closed-loop transfer function, 468, 469
CMAC (cerebellar model articulation controller), 794
CMOS, *see* Complementary metal–oxide–semiconductor
CNC, *see* Computer numerical control
Coatings, temperature-sensitive, 173–174
Cognitive illusions, 282
Collective-inquiry methods, 270

Third-party acquisition systems, 226
Three-mode controllers, 404
Three-phase brushless motors, 554, 555
Three-phase stepper motor, 563
Three-port element, 310, 311
Three-position on–off device with hysteresis, 373
Three-term controllers, 540
Three-way servovalves, 582
Three-wire bridge circuit, 155, 156
Threshold, 4
Through variable, 119
Through variables, 303, 304
Time-based data acquisition, 214
Time constant, 155
Time-domain design, 523, 527–531
Time-domain reflectometry, 171
Time-domain response, 523, 527–531
Time lag, 496, 497
Time-series forecasting, 276
Time standards, 116–117
Time-varying systems, 365–366
Toolboxes, 438
Tool motion statements, 707–710
Tools, robot, 711–712
Torque-to-inertia ratio, 557, 559
Total truncation error, 358
Tracking applications, 770–772
Tracking errors, 624
Tracking feedback, 794
Trajectory, 371

Transducers, 69, 389–392
bridge, *see* Bridge transducers
characteristics of, 3–4
definition of, 3
displacement/velocity, 389–391
flow, 391–392
gyrating, 310
pure, 308, 310
temperature, 391
transforming, 308, 310
Transducer-matched impedances, 57–58
Transfer function(s), 326–327, 385
of cascaded elements, 458–460
closed-loop, 468, 469
of LTI system, 451–452
open-loop, 469
second-order, 471–472
and state-space descriptions, 752–754
Transformation matrices:
for continuous-time state-space canonical forms, 728–731
for discrete-time state-space canonical forms, 737–739
Transformation ratio, 308
Transformers, ideal linear lumped two-ports, 43
Transforming LTI ordinary differential equations, 450–451
Transforming transducers, 308, 310
Transform methods, 321–350
response to periodic inputs using, 337–350
transient analysis using, 328–339
Transform properties, table of, 322–324
Transform table, 323
Transient analysis using transform methods, 328–339
complex *s*-plane, 335, 336
effect of zeros on transient response, 337
first-order transient response, 329–333
higher-order systems, transient response of, 335, 337
parts of complete response, 328, 329
performance measures, transient, 336, 338, 339
second-order transient response, 334–335
test inputs/singularity functions, 329, 331
Transient response:
effect of zeros on, 337
first-order, 329–333
of higher-order systems, 335, 337
second-order, 334–335
Transient response of system, 328
Transistor–transistor logic (TTL), 391
Transit time meters, 183
Translated function, 449
Translational velocity, 390, 391
Transmission Control Protocol/Internet Protocol (TCP/IP), 232
Transmitting system, 70
Transport delay, 438, 439
Transverse sensitivity, 76
Trees, 270–272
Trend extrapolation, 276
True value (μ), 9
Truncation, 12, 13
Truncation errors, 358
Truth tables, 246, 247
T-statistic, 28
TTL (transistor–transistor logic), 391
T-type element, 304, 305, 307
Turbulence, 185
Turning tools, 698
Two-arm bridge, 86, 92
Two-mode control, 403
(2%) setting time, 333
Two-phase ac motors, 394
Two-phase ac servomotors, 557, 560
Two-phase brushless motors, 552, 554
Two-phase-on switching, 563
Two-port devices, 41–43
Two-port element, 307, 308
Two-position control, 399
Two's complement, 847–848, 850
Two-sided test, 29–30
Two-stage valves, 396
Two-terminal element, 303, 304
Two-way servovalves, 582–584
Two-wire bridge circuit, 155, 156
Two-wire direct circuit, 155, 156
Type H electrical modulators, 569, 570
Type I errors (α), 23, 24
Type I filters, *see* Tchebyshev filters
Type II errors (β), 23, 24

Type II filters, *see* Inverse Tchebyshev filters
Type T electrical modulators, 569, 570

U

Ultimate-cycle method, 413
Ultimate gain, 413
Ultrasonic flowmeters, 182–185
UML (Unified Modeling Language), 683
Unbalanced-design actuators, 574, 575
Unbiased estimates, 9
Uncertainty, propagation of, 10–12
Uncertainty interval, 12–13
Uncontrollable systems, 412
Undamped natural frequency, 471–472
Underdamped response, 335
Underlapped valves, 395
Underlapping, 611, 613
Undershoot, 532
Unified Modeling Language (UML), 683
Uniform sampling, 377–378
Unipolar drive PWM amplifiers, 572–573
U.S. standards, 157–158
Unit step function, 461–462
Unit step input response, 472–474
Unobservable systems, 412
User-programmable ROM (PROM), 249–250
Usual case, 9–10

V

Vacuum deposition, 74
Value system design, 267, 269
Valve positioners, 397, 398
Variability comparison, 24, 27
Variable-area meters, 177–179
Variable-reluctance (VR) stepper motors, 564, 565
Variance, 362
Velocity algorithm, 426
Velocity control systems, 400–401, 543
Velocity error coefficient (c_1), 389
Velocity transducers, 390, 391
Vena contracta, 52*n.*
Venturi flowmeters, 176, 177, 396
Verilog-A model, 870
Virtex-E FPGA, 251
Viscosity immunity ceiling, 179
Viscous drag, 179
Vishay Measurements Group, 81
Voltage:
  Kirchhoff's law of, 832–833, 838
  as term, 828
Voltage source, 828, 834
Voltmeters, 834, 835
Volume flow rate, 174
Vortex-shedding flowmeters, 181, 182
VR stepper motors, *see* Variable-reluctance stepper motors

W

Warmup time, 102
Water clock of Ctesibius, 444
Watt, James, 395, 444
Web programs and interfaces, 235
Welding, 77
Well-damped systems, 633–637
Western Regional Strain Gage Committee (WRSGC), 80
Wheatstone bridge, 81–91, 858
  equations, 82–86
  lead wire effects, 85–88
  temperature compensation, 87, 89–91
Whirlwind computer, 697
Wide-band paints, 171
Windowing, 200, 201
Wireless access points, 237
Wireless transmission, 237
Wire strain gages, 73, 74
Word (term), 844
Work (term), 828
Working standards, 116
WRSGC (Western Regional Strain Gage Committee), 80

Z

Z-domain:
  performance related to proximity of closed-loop poles to unit circle, 536–538
  pole locations in, 532, 535–539
  root locus in, 537–539
  stability analysis of closed-loop systems in, 535–536
Zero(s):
  effects of additional, 474–476
  of $F(s)$, 324

as term, 4
in *z*-plane, 461
Zero drift, 4
Zero-input response of system, 329
Zero-order data hold, 379–381
Zero-order hold (ZOH), 466, 468, 676
Zero stability with temperature, 103
Zero-state response of system, 329
Ziegler–Nichols rules, 412–413
ZOH, *see* Zero-order hold
Zone-box circuits, 138–139
Zone boxes, thermocouple, 143
Z-plane, control design in the, 428–432
Z-transforms, 198, 199, 378–380, 459, 461–468
of elementary functions, 461–462
poles and zeros, 461
properties/theorems of, 462–463
pulse transfer function, 463–465
single-sided, 461
table of, 465
zero-/first-order hold, 464, 466–468
